

## **To Keep A Forest Going, You Have To Keep It Growing!**

Can you think of anything that gives us air, fruit, wood, paper, and places to live? How about trees? More than 40% of Idaho is covered with trees. Trees provide schools for kids, jobs for adults, paper for money, homes for animals, and food for survival.

I think that people need to remember how the Indians used the buffalo. They used EVERY part of the buffalo. They didn't waste any of it. I think we need to do the same with our trees. We need to learn how to use every part of the tree.

If we didn't have any trees, life would be so miserable. Trees help us to breathe! We need to take care of the trees we do have, replant the trees that we use to live, or those that get burned down.

The trees help to take care of us, so we should help take care of the trees! To keep a forest going, you have to keep it growing!!!
